## EDUCATION

---

### University of Waterloo

*Bachelor of Applied Science, Computer Engineering*

Waterloo, ON

*Apr. 2025*

## TECHNICAL SKILLS

---

**Languages:** Java, C#, SQL, Python, C/C++, TypeScript, JavaScript, HTML/CSS

**Frameworks:** Spring Boot, .NET, JUnit, React, Express.js, Flask

**Technologies:** Git, Docker, AWS, Azure, Jenkins, Linux, Claude Code

## EXPERIENCE

---

### Software Engineer

July 2025 – Present

*Proofpoint Inc.*

*Toronto, ON*

- Designed and implemented features for an email security and threat detection platform, translating product requirements into technical designs and implementation plans while meeting customer compliance standards.
- Enhanced a Java message ingestion pipeline with language detection and Apache Lucene indexing, enabling efficient searching of 10,000+ daily messages by language.
- Developed background Java reporting jobs to aggregate and transform millions of MySQL records, using efficient data structures and batch processing to keep report generation performative at scale.
- Strengthened C# public API security by enforcing permission-based authorization checks, preventing users from bypassing access controls by modifying search parameters.
- Collaborated on an AI-assisted development pilot, defining model-selection guidelines and token-saving workflows that reduced development time for new features by 20%.

### Full Stack Developer Intern

Sept. 2024 – Dec. 2024

*Sparklease Inc.*

*Toronto, ON*

- Spearheaded the development of a webpage to showcase discounted cars by integrating a backend flagging system for automated price drop detection and achieving 100+ daily impressions.
- Designed modular Azure metric tracking functions, enabling performance monitoring and bottleneck detection.
- Streamlined the car listing process by implementing an in-memory cache, speeding up page loads by 300%.

### Junior Software Developer Intern

Jan. 2023 – Apr. 2023

*JANA Solutions*

*Aurora, ON*

- Implemented C# generic repository classes to streamline data access across multiple risk calculation services, improving maintainability and code re-usability.
- Resolved page overflow and loading errors by implementing backend pagination endpoints, reducing the response times of search results and page loads by 40%.
- Documented all internal REST API endpoints with XML comments, improving API discoverability and developer experiences through Swagger.

### Software Engineering Intern

May. 2022 – Aug. 2022

*TD Bank*

*Toronto, ON*

- Designed and implemented backend features for a new debit card printing app deployed in 200+ branches across the U.S., enabling seamless processing of print requests and customer data with Java and Oracle SQL.
- Developed Spring-based GraphQL endpoints to support multiple debit card types, and integrated them into a React frontend using Axios and TypeScript objects.
- Created a database schema for storing detailed print requests in a SQL database, ensuring reliable data entry for all supported card types.

### Software Developer Intern

Jan. 2021 – Apr. 2021

*TD Bank*

*Toronto, ON*

- Improved end user experiences on TD's EasyWeb online banking platform by fixing bugs and developing 15+ web modules such as modals, dropdowns, and tables.
- Led the refactoring of a JSP page in a Spring Boot application to meet accessibility standards for JAWS users, improving UI usability across assistive technologies.
